

To start the process we require the following details from the client.

1. Word press Admin Credentials: To understand how the current system works.
2. Shopify Admin Credentials: To understand how the rent gear system works. We understand the client doesn't want to move forward with Shopify.
3. Server Details: To know what is the current capacity of the server and we can suggest any upgrade if required.
4. Back End Credentials: To understand how the backend of the current website is functioning.

Additionally we may require the following suggestions from the client.

1. Wireframe for the Rent Gear
2. Currently the website doesn't have any payment gateway. Does the client want to add the payment module as well in the new website?
3. There is a section in the current website on Fitness Calculation. We may require the algorithm behind it.
4. Currently the website is providing the customer to track their booking. Does the client want to add that as well with the new website?
5. What all information should be dynamic on the product page?
6. Any additional requirement from the client side for future development
7. We need requirement document (What functionalities, form fields, how processing) for new development.
